

P&R Specialty, Inc. Job Post

2nd Shift Injection Molding Process Technician

P&R Specialty, Inc., a leading manufacturer of Plastic Spools, Fiber Spools and Plywood Reels serving the wire and cable industry for 40 years, is seeking a 2nd Shift Plastics Technician to join their growing injection molding team. The Plastics Technician is responsible for verifying and ensuring products meet quality standards, ensuring processes are optimized to achieve process efficiency, and performs general maintenance on equipment while following safe work practices.

Key performance objectives in order of priority are:

- Responsible for verifying and ensuring that all products meet established quality standards and specifications to reduce scrap while maintaining process efficiency.
- Responsible for verifying and ensuring all processes are optimized to achieve process efficiency and reduction of scrap.
- Performs monthly inspections and general maintenance on equipment while following established safe work practices to achieve quality and efficiency targets.

Qualified candidates will have their High School Diploma or GED and 3-5 years of injection molding processing experience. Excellent problem solving and decision making skills are a must! In this position, a candidate with a positive attitude and excellent attendance record will succeed.

Compensation will be structured around the individual and their capability. Benefit package includes health insurance, vacation and holiday pay, 401(k).
